

CARY MEMORIAL LIBRARY

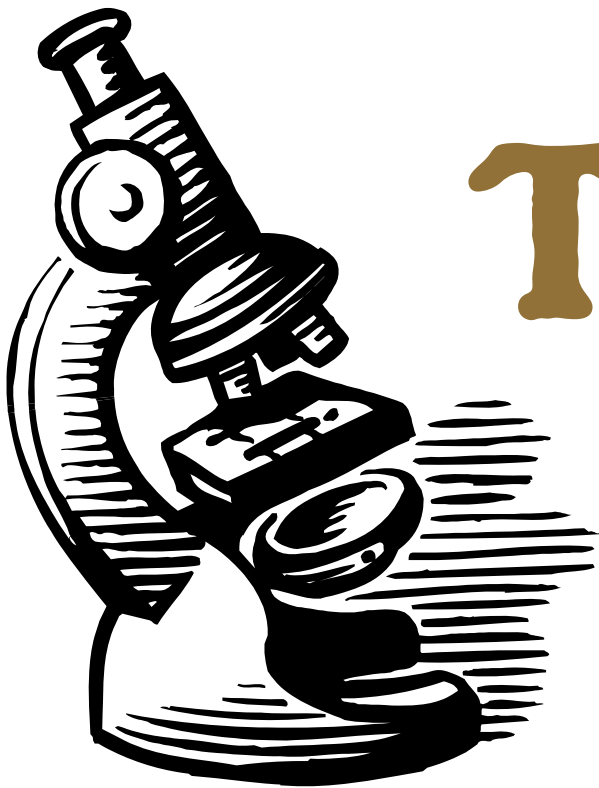

HEALTH & WELLNESS SERIES

funded by a gift from Shire Human Genetic Therapies

From Lab Bench to Bedside with Dr. Sue Bruhn

The process of bringing a new drug or therapy to market has been described as running a gauntlet. In this program, Dr. Sue Bruhn, Senior Vice President, Strategic Planning and Program Management, Shire Human Genetic Therapies, discusses why this process is so costly, so lengthy and so fraught with risk, and how drug companies manage that process to bring new drugs and therapies to patients. Dr. Bruhn will also discuss the particular challenges of developing treatments for rare diseases.

Due to limited seating, free tickets are required for this event. Tickets may be picked up at the Reference Desk, beginning August 16.

Thursday

September 16

@ 7:00 PM
