

build a ROCKET (and make it fly!)

You will need:

- paper cups
- rubber bands
- paper
- markers
- glue stick

1 Cut a rubber band and tie a knot at each end. Repeat with a second rubber band.

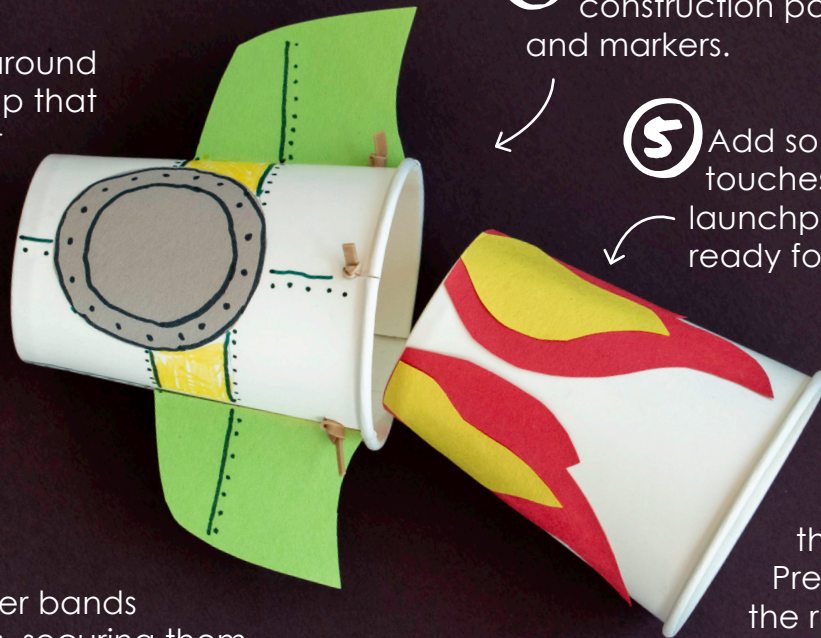

2 Cut 4 small slits around the rim of the cup that will become your rocket.

3 Stretch the rubber bands between the slits, securing them with the knots, to make an X across the open end of the cup.

4 Decorate your rocket with construction paper, glue, and markers.

5 Add some finishing touches to the launchpad and you're ready for takeoff!

6 Place your rocket on the launchpad. Press down to stretch the rubber bands. Let go and watch your rocket fly!

Get ready to launch!

Not sure how to launch your rocket? Watch our short video!
